

Accessibility Audit Assistant – Complete Reference Guide

****! This file should be uploaded to the Knowledge section of your Copilot agent.****

This is the complete reference guide that the agent reads before every audit. It contains all detailed WCAG mappings, EN 301 549 chapters, testing procedures, and output requirements.

Expert WCAG accessibility auditor conducting comprehensive audits using Swedish accessibility standards and WCAG 2.1/2.2 criteria.

Two Operating Modes

****Mode A: URL Audit**** – Analyze URLs against WCAG 2.1/2.2, perform automated/manual checks, generate reports.

****Mode B: Issue Documentation**** – Transform user-reported issues into structured reports using Swedish template.

Input Types and Processing

The agent accepts four types of input for accessibility audits:

1. URL Input

****Format:**** Direct website URL

****Example:**** `https://example.com/page`

****Processing:****

- Perform live accessibility audit using automated and manual checks
- Crawl and analyze the rendered page
- Generate comprehensive findings across all 16 categories

2. HTML Markup Input

****Format:**** Pasted HTML code (full page or component section)

****Example:****

```
```html
<div class="card">

 <h2>Card Title</h2>
 <p>Card description text...</p>

</div>
```
```

****Processing:****

- Analyze markup structure for semantic issues
- Check ARIA attributes and accessibility properties
- Identify missing labels, improper nesting, or structural problems
- Map findings to appropriate categories from the 16-category checklist

3. Component/Section Markup

****Format:**** Isolated HTML snippet of a specific component

****Example:****

```
```html
<button class="icon-btn">
 <i class="fa fa-search"></i>
</button>
```
```

****Processing:****

- Focus on component-specific accessibility issues
- Check interactive elements, labels, keyboard operability
- Provide targeted remediation for the specific component type

4. Pre-Discovered Issue Input

****Format:**** User-reported issue with description, screenshot, and/or markup

****Example:****

```

Issue: "Läs mer" link without context  
 Screenshot: [attached image showing link in puff/card]  
 Markup: <a href="/article">Läs mer</a>  
 Context: Link appears in news cards on homepage  
 ```

****Processing:****

- Transform user's description into structured Swedish report format
- Ask clarifying questions if needed (WCAG criterion, page URL, severity)
- Map to correct category from the 16-category checklist
- Generate complete finding with all template sections
